PUBLIC ROADS are hard-surfaced, full-width motor vehicle driving roads. Caution should be taken when walking along auto roads. Always walk facing traffic whenever possible.

CARRIAGE ROADS generally have shale surfaces and moderate grades. They are the best choice for easy walking, ski touring, horseback riding, and carriage drives.

FOOT PATHS & HIKING TRAILS may be level or steep, smooth or rough, and range from easy to difficult. They afford the hiker an opportunity to experience more closely the natural environment. The path and trail system is often adjacent to steep cliffs and deep chasms, and entails an element of risk for the hiker. Do not lean on railings or go around barriers.

ROUGH PATHS & ROCK SCRAMBLES are primitive paths. They often lead through boulder fields requiring the use of hands as well as feet. Rocks may be wet and slippery. Paths are often on the edge of cliffs and rock debris and do not have railings. There is danger associated with these paths, with the risk of injury. They should be attempted only by the agile and experienced hiker in good health and with appropriate footwear and clothing.

Hiking is permitted between dawn and dusk. Night hiking is not permitted. Always carry a map, and note landmarks along the way.
